Silk Screening

Silk Screening

The addition of graphics onto parts is done through the silk screening process. Any critical information required for the proper use of a component are printed on painted or plated parts via this silk screening process. Silk screening provides a more elegant solution to this information requirement than the use of a stick-on label.

- Silk screening of logos, company names, operational instructions, connector identification, etc. is accomplished with this process.
- Multi-color silk screening on parts of varying sizes and of relative flatness are processed to exacting customer specifications.
- Nameplates, enclosures, cabinetry, front and rear panels, etc. utilize the silk screening process extensively.
- Inks used in silk screening can be a stock color or matched to customer needs.

CAPABILITIES

Substrates Coated	Alloys Aluminum Cold rolled steel Plastic (ABS, PC, ABS/TC, Kydex, PPO, PPE, Fiberglass)
Secondary Operations	Masking Filling/Sanding
Industries Served	Telecommunications Security Gaming Medical Instrumentation Computer Semiconductor Aerospace Fire Protection Sporting Equipment Laboratory Testing Equipment Life Sciences
Value Added Services	Short term storage of finished or unfinished products Production planning and delivery schedules Free local deliveries by our own transport facilities
Equipment List	5 Overhead Conveyor Systems 13 Spray Booths Fully Automatic 400 foot Powder Coating Line Custom Masking Tooling 5 Stage Automatic Phosphating System
